

Classification 11.734 **No.** ^{No} negative **State** Maine

Place Presque Isle

Description. Hinged rope conveyor. each section 16"x600". The joint will allow the sections to be bent at an angle of 90° even when running. On a 6' section potatoes were raised 2' as long as they were being fed continually on the horizontal section. The 1/6 h.p. motor shown is too small, however for when conveyor is heavily loaded it stalls, a larger motor is available and will be used. Metal plates are inserted at the inclined section when machine is in operation. Note bin opening arranged for conveyor. A.D. Edgar Feb. 6, 1933
